HG6000 HYGIENIC PHONE

Hygienic Clean Room Loud-speaking Telephone

The **HYGIENIC** Phone was designed to meet the communication needs of pharmaceutical and medical facilities. The Lexan, easy-clean flat face panel is resistant to harsh cleansers, chemicals and contamination, as there are no nooks and crannies for material to accumulate into.

The Hands-free operation, Auto answer and Auto Hang-up of calls makes things easy for the user in a clean room environment.

The **HYGIENIC** Phone was specifically designed for use in hygienic areas, the flat, smooth surface of the Hygienic Phone is easily cleaned, it does not have

The Hygienic Areas Telephone - contd

projecting buttons and crevices that can retain residues and become contaminated.

The front panel's Lexan polycarbonate composition makes it resistant to harsh cleansers and most other chemicals used in a laboratory.

The **HYGIENIC** Phone has a number of pre-set and automatic features to minimise the actions required to take and make a call. For example, the volume control can be adjusted by increments to 4 pre-sets but cannot be accidentally turned off.

Handsfree operation has switching circuitry to screen out constant background industrial noise.

Direct-Dial Keys allow calls with one-touch dialling to 20 locations and the Auto-Redial facility will retry the number 3 times if it is engaged.

To minimise handling the **HYGIENIC** Phone has hands-free operations so you will not have to interrupt activities just to answer the telephone, it will answer and terminate calls automatically.

The unit is flexible it has many options to satisfy specific needs.

In a sensitive environment such as a security clean room access can often be difficult for service people to do basic things such as number changes, this is where remote programming with a telephone call is a real benefit.

Dimensions

Front panel	H - 279mm, W - 245mm, D - 2mm
Wall cut out	H - 225mm, W - 197mm, D - 62mm
Power supply	12VAC - 300mA
